
PREVALUATE—DELIVERING HEALTHIER REVENUES FOR A HEALTHIER MISSION

Patient-focused screenings built for behavioral health.

With Altruis **PreValuate**, patients complete the electronic assessments on site. Screenings are automatically and immediately scored. Your staff sees right away if a patient is at risk or in need of targeted outreach or additional screening—and your organization better tracks care needs and progress.

PATIENT-FOCUSED, AUTOMATED INSIGHT AND SCORING

- Gain insight into what patients are experiencing and where there's cause for concern or a call for help.
- Screenings are self-administered. Patients who aren't comfortable or ready to discuss concerns face-to-face have another avenue to make their voice heard.
- Color coding (green/yellow/red). See when action is needed.
- Screenings catch behavioral health issues before crisis stage—enabling providers to uncover concerns that otherwise would have gone unnoticed.
- After patients complete the assessment(s) on a tablet, the results are automatically scored and attached to the patient record—enabling you to screen 80-90% of daily patient flow with no workflow impact.

GROW REVENUE—WITH MINIMAL WORKFLOW IMPACT

- Electronic behavioral health screenings are reimbursed at a higher rate than paper-based assessments.
- No up-front costs: 100% electronic, \$0 implementation fee, and all technology and EHR integration included.
